Internship Program

Altair is looking for engineering students completing their junior (3rd) year with concentrations in mechanical, aerospace, or civil engineering who are motivated to learn and gain professional experience throughout the program.

STEP 1

Five students will be chosen to complete a paid summer internship (3 months) within the Altair America’s Field Operations Organization. Here students will learn the fundamentals of the computer-aided-engineering (CAE) industry by working with Altair project management teams, customers in various industries, as well as many other organizational functions within the company. During their time in the field operation’s team, the students will not only be able to learn the fundamentals of HyperWorks, but will become part of the Application Engineering team. They will participate by interacting directly with customers through functions such as site visits to customer locations, delivering presentations, and developing training lectures and tutorials. Students should expect project assignments throughout their internship that will challenge them to apply their skills for problem-solving and applying the knowledge they gained along the way.

STEP 2

The Altair Internship Committee will be in frequent communication with the interns during their final (4th) year of study. The following spring they will be reviewed to potentially receive an offer for full-time employment at Altair or, depending on their decision to attend graduate school, receive an offer to renew their internship for up to 6 months.

Where You’ll Work

Five interns will be recruited annually and assigned to positions at Altair regional offices at the following locations:

• Troy, MI (2 Positions)
• Boston, MA (1 Position)
• Houston, TX (1 Position)
• Irvine, CA (1 Position)

Who is Altair?

Innovate. Create. Design. With an inventive team environment and unique corporate culture, Altair stresses the importance of ‘Empowering Innovation through People and Technology.’ Collectively, the team produces software and advances technology which brings products like HyperWorks and PBS Works to market. In addition, Altair’s tools are used for design projects awarded to Altair’s product development division, Altair ProductDesign. As a result, Altair enables customers to improve their processes and efficiency by providing first rate products, expertise and support.

Quote from Former Intern

“Interning at Altair really helped me define my goals more clearly and prepare for a successful career in the field of engineering. While at Altair, I felt like a regular employee because I worked on real projects with experienced engineers. I was able to interact with people from diverse backgrounds and not only grow professionally but also personally”

- Pavel Yurevich, Brigham Young University
